

Interdict — vendor-payment fraud interception

Twelve Google ADK agents behind a durable case state machine. The payment is frozen **before** any agent forms an opinion, and released only if independent verification earns it. Every Google Cloud binding sits behind a Protocol carrying its own location.

Gemini 3.6 Flash · routine agents
Gemini 3.7 Flash · adversarial tier
Google ADK 2.7.1 · LlmAgent + FunctionTool
Vertex AI · location: global
